Ecological Modelling 89 (1996) 295–296

ECOLOGICAL MODELLING

# Contents of *Ecological Modelling*, Vol. 89

VOL. 89 NOS. 1–3 AUGUST 1996

Modeling carbon cycling on disturbed landscapes
W.R. Emanuel (Charlottesville, VA, USA) . . . . . 1
Modelling orthophosphate evolution in a high rate algal pond
F. Mesplé, C. Casellas, M. Troussellier and J. Bontoux (Montpellier, France) . . . . . 13
Population dynamics of a tree-dwelling aphid: individuals to populations
P. Kindlmann and A.F.G. Dixon (České Budějovice, Norwich, Czech Republic, UK) . . . . . 23
Stability, persistence and structural stability in a classical predator–prey model
M.R. Myerscough, M.J. Darwen and W.L. Hogarth (Sydney, N.S.W., Nathan, Australia) . . . . . 31
Functional response as a component of dynamic simulation models in biological control: the *Catolaccus*–boll weevil system
B.C. Legaspi, Jr, R.I. Carruthers and J.A. Morales-Ramos (Weslaco, TX, USA) . . . . . 43
Implications of semi-stable attractors for ecological modelling
R.E. Byers and R.I.C. Hansell (Toronto, Canada) . . . . . 59
On some aspects of the management of a stochastically developing forest
A.A. Batabyal (Logan, UT, USA) . . . . . 67
A three-dimensional model of forest development and competition
M. Williams (Norwich, UK) . . . . . 73
A spatially-explicit model of search path and soil disturbance by a fossorial herbivore
D.C. Andersen (Denver, CO, USA) . . . . . 99
S-system modelling approach to ecosystem:Application to a study of magnesium flow in a tropical forest
N.V. Torres (Islas Canarias, Spain) . . . . . 109
A multiconstituent moving segment model for water quality predictions in steep and shallow streams
S.S. Park and Y.S. Lee (Kangwon, South Korea) . . . . . 121
A mechanistic model for submerged aquatic macrophyte photosynthesis: *Hydrilla* in ambient and elevated $CO_2$
D.-X. Chen and M.B. Coughenour (Fort Collins, CO, USA) . . . . . 133
Landscape pattern, spatial behavior, and a dynamic state variable model
B.D. Baker (Rohnert Park, CA, USA) . . . . . 147
A model based on soil structural aspects describing the fate of genetically modified bacteria in soil
N. Van der Hoeven, J.D. Van Elsas and C.E. Heijnen (Delft, Wageningen, Netherlands) . . . . . 161
Modelling the tree population dynamics of the most abundant species in a Nigerian tropical rain forest
J.S.A. Osho (Johannesburg, South Africa) . . . . . 175
Modelling the role of host plant dispersion in the search success of herbivorous insects: Implications for ecological pest management
S.H. Levine and R.E. Wetzler (Medford, MA, USA) . . . . . 183
Model convergence and state variable update in forest gap models
H. Bugmann, A. Fischlin and F. Kienast (Schlieren, Birmensdorf, Switzerland, Germany) . . . . . 197
Harvesting a lichen–reindeer system in an uncertain environment
M. Virtala (Oulu, Finland) . . . . . 209

Modelling the vertical distribution of insects
W. Ogana (Nairobi, Kenya) . . . . . 225
Aquaculture pond ecosystem model: temperature and dissolved oxygen prediction – mechanism and application
S.D. Culberson and R.H. Piedrahita (Davis, CA, USA) . . . . . 231
One-dimensional unsteady flow and unsteady pesticide transport in a reservoir
D.J. Mossman and N. Al Mulki (Kansas City, MS, Irbid, USA, Jordan) . . . . . 259
A model of the simultaneous nitrogen and carbon removal in a biofilm
H. Hjuler (Copenhagen, Denmark) . . . . . 269
